Ephesians 5:11, 13-16: "And have no fellowship with the unfruitful works of darkness, **but rather prove them. But all things that are reprov'd are made manifest by the light:** for whatsoever doth make manifest is light. Wherefore he saith, **Awake thou that sleepest, and arise from the dead, and Christ shall give thee light. See then that ye walk circumspectly, not**

as fools, but as wise, Redeeming the time, because the days are evil."

The **1828 Noah Webster Dictionary** defines:

Reprove: To blame, to convince of a fault, or to make it manifest, to excite a sense of guilt.

Circumspectly: Cautiously; with watchfulness every way; with attention to guard against surprise or danger.

Matthew 24:24: "...if it were possible, they shall deceive **the very elect.**"

II Corinthians 2:11: "Lest Satan should get an advantage of us: for we **are not** ignorant of his devices."

II Chronicles 7:14: "If **my people**, which are called by my name, shall humble themselves, and pray, and seek my face, and turn from their wicked ways; then will I hear from heaven, and will forgive their sin, and will heal their land."

Psalm 138:6 Though the LORD be high, **yet hath he respect unto the lowly: but the proud he knoweth afar off.**

Psalm 138:7 Though I walk in the midst of trouble, thou wilt revive me: thou shalt stretch forth thine hand against the wrath of mine enemies, and thy right hand shall save me.

Psalm 138:8 The LORD will perfect that which concerneth me: thy mercy, O LORD, endureth for ever: forsake not the works of thine own hands.

[Veterans Hospital Orders Emergency Installation of HEPA Air Filters to Create A Multi-person Ebola Quarantine Ward](#)

According to potrblog in the video below, the "**Veterans Administration hospital in San Juan, Puerto Rico is expecting the near term arrival of a number of Ebola patients and is creating an entire Ebola Ward to handle the infected patient inflow,**" and he states that it is unclear if this is the planned location being set up to quarantine US military members coming back from west Africa after becoming infected with the deadly Ebola virus **or** if its for a purely Puerto Rican Ebola outbreak.

Play: <http://youtu.be/FXcC-igW92q>

[City health officials desperately search for experimental drug to use on Ebola patient Craig Spencer](#)

Brincidofovir (Brin-cid-offo-veer) is not approved by the FDA, but doctors or hospitals can apply to use the drug in special cases.

Five hours after Ebola-stricken Craig Spencer was hauled into Bellevue Hospital's quarantine unit, **the city Health Department sent a frantic email marked "URGENT" — asking if New York area hospitals, researchers and pharmacies had an experimental drug that has shown promise against the deadly virus.**

It's not clear if the antiviral drug Brincidofovir ever made it to Bellevue or if it was administered to Spencer, but the hunt was on Thursday night.

"The drug would presumably be under the jurisdiction of your investigational drug or research area," the 6:20 p.m. email obtained by the Daily News read.

Brincidofovir is a modified version of an antiviral drug called cidofovir, **which inhibits replication of a variety of DNA viruses** including poxviruses and herpesviruses. As a result, viral replication is inhibited.

Side effects: Gastrointestinal side effects reported in earlier trials. Temporary dose interruptions for grade 3 diarrhea were successfully utilized in the trial, with one permanent discontinuation for diarrhea. Three additional discontinuations in the trial were reported for abdominal pain, **lower GI**

hemorrhage, and severe rash. http://www.drugs.com/clinical_trials/chimerix-presents-brincidofovir-cmx001-adenovirus-phase-2-results-16051.html

White House Emergency Alert Interrupts TV Viewers Across America

Weird message warns viewers not to use phones amidst Ebola concerns.

Play: <http://www.myfoxtlanta.com/story/26882632/u-verse-customers-report-strange-emergency-message>

UPDATE: AT&T has blamed a “nationally syndicated radio station” for sending the alert message, **despite the fact that only the federal government can send out EAS alerts. The alert system, “can only be activated by the President in times of emergency,” reports Fox 5.**

100,000 Body Bags And Ebola In NY!? 4th Ebola Positive In The US Shows Up In The Big Apple Just One Week After Cuomo Announces Random Ebola Drills On NY Subway!

The New York Times has [just confirmed](#) that Dr. Craig Spencer has just tested positive for Ebola...a day after he went on the subway system to go bowling before renting a taxi ride home. **With stories breaking like this, we find it more easy to believe that there may REALLY be 100,000 body bags ready for potential Ebola victims in New York as warned of in the video report below by [CyberTribeLIVE](#). Is it only a coincidence that just a week ago, random Ebola drills were announced for NY subways?**

A doctor in New York City who recently returned from treating Ebola patients in Guinea tested positive for the Ebola virus Thursday, becoming the city’s first diagnosed case.

Even as the authorities worked to confirm that Mr. Spencer was infected with Ebola, **it emerged that he traveled from Manhattan to Brooklyn on the subway on Wednesday night, when he went to a bowling alley, and then took a taxi home.**

Two major questions were brought to ANP's attention.... 1.) Why has the CDC, whether deliberately or by sheer incompetence, lied about the incubation period of Ebola? Possible answer, **because they needed time for maximum penetration and exposure.** (Note- According to the CDC, incubation is 2 to 21 days, **but it wasn't until after 42 days, that Nigeria was declared by WHO, to be Ebola free**)

2.) **Why has the new "Ebola Czar" been totally silent? Possible answer because he is a depopulation proponent and has stated publicly, as shown in this video, that "overpopulation" is today's biggest problem.**

He told me that the trigger activation would be within the chemtrails. I was told this was a deadly biological weapon of mass extermination, calculated and designed to go airborne and thus, to be highly contagious

Please read. **I talked with a top scientist fifteen years ago about this issue. He told me that the trigger activation would be within the chemtrails. I was told this was a deadly biological weapon of mass extermination, calculated and designed to go airborne and thus, to be highly contagious. The masses would lay in their homes and bleed out. I received the following information from an ex-military guy whom I have known for about eight years. He served in special operations. Im recalling some of the many things he said. He suspects that the 1,600 US Army troops who were recently sent to Africa to contend with the Ebola threat are to be exposed to this Ebola virus (which is not the true Zaire Ebola,**

but a man-made variant; you'll find out why in a moment), and that these troops will be injected with the new Ebola vaccine, which will subdue that specific virus. However, recalling his victimization as a virus vector in the Army, he suspects that the anti-Ebola vaccine will be given to these US soldiers in Africa, and just as they did to him this vaccine will also contain a trigger element. These soldiers, who have unwittingly been made virus vectors, will then come home to the United States, and many of them will be discharged; thusly, they will be dispersed to all areas of the United States. This man told me that when these vector soldiers come home to the United States, pathogens will later be released into the atmosphere, perhaps in chemtrails and/or in ground releases, such as in the subway systems of major cities. The latter plot has already been perpetrated in the New York City subway system when they released the serratia marcescens bacteria, which was encapsulated in light bulbs and tossed into the subways. This diabolical plot is documented in the book, CLOUDS OF SECRECY, by Prof. Leonard Cole of Rutgers University. My ex-military friend told me that the trigger element planted in the U.S. soldiers ebola vaccinations in Africa will then recombine in their bodies with the pathogen that is to be released throughout the United States. The product of this recombination of the pathogen, to be released, and the trigger element (that was earlier injected into these 1,600 vector soldiers) will be a deadly biological weapon of mass extermination, calculated and designed to go airborne and thus, to be highly contagious. Remember the BATMAN comic book series of 1996, foretelling, in a symbolic story line, this diabolical plot for mass extermination of the American population. You see, the flu vaccine contains the trigger element which, when injected into thousands of victimized vectors, will recombine within the bodies of some of these vectors to make the lethal-but-non-contagious virus (to be released) become an airborne mutant of that virus. My contact also believes that the recent ushering in of thousands of children from Central America across the Texas border near San Antonio is a part of this very same plot that is being perpetrated against our 1,600 U.S. soldiers . . . and I suspect that the ushering in of thousands of illegal Mexicans across the border is likewise another part of this very same diabolical plot of mass extermination of the American population. In fact, infowars.com reporters have confirmed that the Centers for Disease Control is spearheading an unprecedented roundup of illegal Mexicans, who are exhibiting flu-like symptoms. They are asking a vital question: Where are the CDCs disease agents taking all of these illegal, apparently diseased Mexicans? My ex-military, special operations, vaccine-victimized contact told me that he has learned that those thousands of Central American children are being housed at Lackland Air Force base in San Antonio, near the Texas border. He believes that these children are likewise being infected and injected with the trigger element, as part of this diabolical plot to exterminate the American population. The sick Mexicans, who today are being rounded up and sequestered by the CDC, are probably also being brought to Lackland Air Force Base. And Lackland or some similar place is where all the ill Mexicans are probably being sequestered for vaccination with the trigger element that will later make their disease go lethally airborne. BeforeItsNews.com has recently broken the story of a disease epidemic at Lackland Air Force Base an epidemic that is now kept under a veil of tight secrecy, enforced by ominous threats against the insiders at Lackland. And we have reports that people fleeing Africa are being given easy entry into the United States. More desired fuel to feed the fires of contagion!.

[It seems unusual that we've had a sudden spike in requests for employment background checks from the feds and only since the Ebola thing started has this occurred. I've been in the PD for 24 years with most of it spent in the NCIC part of the PD](#)

Some info to be aware of - I work for local city PD in Tennessee and one of my tasks is processing postal mail requests for reports, records, backgrounds etc. and we also check local background for employment purposes for government agencies - federal, state and local. Something I have noticed in the last few weeks is the sudden increase of requests for employment background checks from the federal office of personnel management (U.S. Government jobs) and

last week I processed three packages of background requests and noticed that a good number of them were for lower wage jobs such as laborers and similar low wage jobs and most of those would be like/similar to janitorial (clean up), heavy labor such as digging either by hand or with heavy machinery.....you see where this could go given the Ebola situation amongst others.

While requests for employment background checks are not uncommon **what is uncommon is the sudden spike of requests coming in large quantities and for, primarily, low wage labor/hard labor positions. Not trying to make a mountain out of a mole hill however there is reason to think that a large number of folks will be needed to do clean up work (possibly mass burials/cremation at some point) and there were some requests for higher wage jobs related to specific/specialized work such as health care, engineering etc. but most were the low wage labor type.**

I've been in the PD for over 20 years with most of it spent in the records part of the PD and in records since January of this year and I've not seen this level of fed employment background requests at all until the last month or so.

Also keep in mind that Knoxville has the main campus of the University of Tennessee, University Hospital which is, most likely, where any Ebola cases in this area would go and we have Oak Ridge National Labs about 40 miles northwest of the city and lots of tech companies in the area as well.

The major regional airport here is McGee-Tyson and the McGee-Tyson Airbase is there as well - Air National Guard. So lots of things around this area **and it's no secret that lots of Russians, mid-east and Asian folks reside here in Knoxville and the surrounding area and in the Smokey Mountain area around/in Gatlinburg, Townsend, Cades Cove.**

U.S. Army: Ebola Goes Airborne Once Temperature Drops

After successfully exposing monkeys to airborne Ebola, which "caused a rapidly fatal disease in 4-5 days," scientists with the U.S. Army Medical Research Institute of Infectious Diseases (USAMRIID) concluded Ebola can spread through air but likely hasn't in Equatorial Africa because the region is too warm, with temperatures rarely dropping below 65°F.

"We... demonstrated aerosol transmission of Ebola virus at lower temperature and humidity than that normally present in sub-Saharan Africa," the 1995 study entitled [Lethal Experimental Infections of Rhesus Monkeys by Aerosolized Ebola Virus](#) reported. **"Ebola virus sensitivity to the high temperatures and humidity in the thatched, mud, and wattle huts shared by infected family members in southern Sudan and northern Zaire may have been a factor limiting aerosol transmission of Ebola virus in the African epidemics."**

"Both elevated temperature and relative humidity have been shown to reduce the aerosol stability of viruses."

ATTENTION ALL BORDER PATROL AND US MILITARY SERVICE MEMBERS-READ THIS AND KNOW THE SAME TECHNOLOGY WILL BE USED AGAINST YOU AND YOUR FAMILIES AND HIGH PROFILE CITIZENS ON THE RED LIST

Last week I attended the NATO Future Forces Expo held here in Prague where we had a Stalwart /SilentPocket booth <http://silent-pocket.com/> . We were well received and I can share that more than a half-dozen international militaries and security services have committed to testing and evaluating SP items for their own use.

BUT WHAT IS MOST NOTABLE. We spoke with a Nation who is Involved in Border Activities and their representatives, **and I was describing how thermal imaging can be used to find a soldier(s) to track and kill them – and now, the 'same can be done with a mobile phones, that most soldiers are carrying and then the man's face changed.** He then told me their forces near the Russian border have been getting rocketed and killed and for a while, they thought it was spies or Russian recon units on the Ukrainian side of the border. **But they learned that it was specifically cell phones and cell phone use which was being used to locate and them which resulted in Multiple Rocket Launcher attacks,**

people can draw their own conclusions.

So what I have suggested could happen is indeed happening and having the phones switched off didn't matter – although it was much easier when they turned on the phones, much like a fighter jet knows when an area radar has been turned on and can track the source.

For the record some militaries use Smartphones for communications with special apps because they are more reliable. But they are also more vulnerable. As a result we have received some orders from militaries who are almost universally waking up to the exposure mobile phone presents. Almost universally most people we met knew exactly what our products represent and what they do. M.M.

Health Officials Expect to Start Vaccine Trials in West Africa as Early as December

"Public health authorities said Friday they hoped to begin trials of Ebola vaccines in disease-ravaged West Africa as early as December and could know around April whether they were effective, clearing the way for possible mass inoculations to stem the epidemic"

http://mobile.nytimes.com/2014/10/25/business/ebola-vaccine-trials-planned-for-december.html?_r=0

WHO: Millions of Ebola Vaccine Doses Ready in 2015

The Associated Press--The World Health Organization says millions of doses of two experimental Ebola vaccines could be ready for use in 2015 and five more experimental vaccines will start being tested in March.

Trials of those two most advanced vaccines, one developed by GlaxoSmithKline in cooperation with the U.S. National Institutes of Health, the other developed by the Canadian Public Health Agency and licensed to the U.S. company NewLink Genetics have already begun in the U.S., U.K. and Mali.

<http://abcnews.go.com/Health/print?id=26422707>

Ebola vaccine trials to begin in Baltimore next month

An unusual request recently appeared in classifieds and on campus bulletin boards —

Wanted: Baltimore-area volunteers to test a vaccine for the Ebola virus.

The response was overwhelming, said Kirsten Lyke, an associate professor at the University of Maryland School of Medicine who is working on the study. The slots for the study were filled within days.

By this time next month, researchers expect that nearly two dozen Baltimoreans will be building immunity to Ebola...

A host of experimental vaccines and treatments for Ebola are speeding through regulatory processes that would usually take months or years as the number of cases grows exponentially in Africa and the outbreak threatens to spill into the United States and other developed nations.... Usually, the process of developing a vaccine and testing it for safety and

efficacy takes years. Given the urgency of the outbreak, that sort of timeline wasn't possible... They decided it would be worth the risk and pledged that while the process would be sped up, no corners would be cut... It uses a chimpanzee cold virus that carries an Ebola protein.

Regarding Funvax Video

See: [FunVax: Pentagon Vaccine Stops Religious Fundamentalism by Targeting 'God Gene'](#)

While I can't be totally dogmatic about the video but the Vmat2 gene does appear to exist (See: [https://en.wikipedia.org/wiki/God_gene & Vmat2](https://en.wikipedia.org/wiki/God_gene_%26_Vmat2), or the God Gene: Reading Spirituality in the Human ...) and that was the main premise whereby this presentation took place. If they could deactivate this gene through some type of genetic vaccine it appears that would be a major victory for Satan as the Lord put it there for a reason. I'm not saying it would mean a person could not get saved, but it wouldn't help. The fact that a vaccine could be developed to deactivate this gene is all the more reason not to take any kind of vaccine as you never know where "they" would try to slip it in.

Also see: [Neurocrine Announces Initiation Of Phase III Study For VMAT2 Inhibitor NBI-98854](#)

Monday, 20 Oct 2014 SAN DIEGO, Oct. 20, 2014 /PRNewswire/ -- Neurocrine Biosciences, Inc.

(NASDAQ: NBIX) announced today that it has initiated a Phase III clinical trial (Kinect 3 Study) of its proprietary Vesicular Monoamine Transporter 2 compound, NBI-98854.

VMAT2 is a protein concentrated in the human brain that is primarily responsible for re-packaging and transporting monoamines (dopamine, norepinephrine, serotonin, and histamine) in pre-synaptic neurons. NBI-98854, developed in the Neurocrine laboratories, is a novel, highly-selective VMAT2 inhibitor.

<http://www.cnn.com/id/102103615>

[Another friend told me a week or so ago her contact at CDC said they are hiding Ebola patients in HI, VA, MD and one other state I forgot.](#)

My Mom's best friend in Dallas just told us she is friends with a man named Lawrence who works with Ms. Vinson's fiancé who is the second nurse diagnosed...His company is being informed by CDC of what is going on. He said TWO more Ebola patients diagnosed at Baylor in Texas CONFIRMED on FRIDAY but being kept out of the news. Baylor did not want to keep them so sent them to Presbyterian. This isn't random info. It's literally my Mom's best friend who has been telling her about Lawrence since this happened. Another friend told me a week or so ago her contact at CDC said they are hiding Ebola patients in HI, VA, MD and one other state I forgot. I hope this isn't true but I believe my Mom's best friend.

[Will Media Ignore Doctors Reporting Disappearance of Ebola-Like Patients? Bombshell revelations swept under the rug.](#)

Play: <http://youtu.be/E6cTPrJdcDM>

Since even before the inception of Ebola fears within the United States, doctors and experts alike have been sounding the alarm over the underground measures taken by the CDC to "disappear" patients exhibiting signs of a potential Ebola infection.

We have heard warnings from former top Border Patrol Agent Zach Taylor, who revealed both in a March video that the CDC was 'snatching up' individuals with flu-like symptoms on the border. We have heard warnings from physicians behind the scenes at medical conferences, detailing how up to 40 cases of potential Ebola are reported each day to the CDC by qualified health professionals and are virtually ignored.

But until now, these physicians have demanded to stay anonymous for fear that they could lose their license and be terminated from their positions. Leading the charge in informing the public as to what we have already gathered from medical professionals speaking off the

record, Dr. James Lawrenzi, DO, exclusively confirmed these reports by other doctors regarding actions taken by the CDC to come in and “disappear” patients from hospitals who show signs of Ebola.

Appearing for the first public breakdown of what we have been told by others in the field, Lawrenzi dropped informational bombshells that the mainstream media should be very concerned about:

Play: 4:00 to 7:14--15:35 to 19:16 <http://youtu.be/eOp2qF13-pA>

Nanosilver Warning

Comment: Most of the current reports regarding natural treatment of Ebola are centered around the 10ppm nanosilver advocated by Rima Laibow and General Stubblebine (both government disinformation agents/operatives for years) via their Natural Health Solutions organization. See my audio teaching below & the PDF. A lot of alternative health and news outlets are picking this nanosilver report up and putting this information out, giving it the appearance of being credible.

Any research they would show you is done in a petri dish and not in the human body and I would not trust the results even if they claimed it had been done in the human body, **because they are known liars and disinformation agents going back many years.** See the PDF link below. They want to get everyone thinking all they need is 10ppm nanosilver to battle Ebola and they are going to have a real rude awakening if that is all they are relying on and then contract Ebola. The weak 10ppm nanosilver solution is not nearly strong enough to go after something like Ebola, especially when compared to 5000ppm or 10000ppm Mild Silver Protein. Also to not advise taking Vitamin C and Selenium (which are the 2 most important components depleted by Ebola) also proves they are disinformation agents.

Nanoparticles: Panacea or Pandora's box?--You can't get a Scientist anymore prestigious than David Suzuki who WARNS against nanoparticles

"Major food companies have rapidly introduced nanomaterials into our food with no labels and scant evidence of their safety, within a regulatory vacuum," "Unfortunately, despite a growing body of science calling their safety into question, our government has made little progress in protecting the public, workers and the environment from the big risks posed by these tiny ingredients."

Studies show nanoparticles can harm human health and the environment.

... They've been shown to:

- 1.) damage DNA,
- 2.) cause lesions on the liver and kidneys, and
- 3.) disrupt cellular functions.
- 4.) A [Cornell University study](#) found nanoparticle exposure changed the structure of intestinal-wall lining in chickens.

- 5.) silver nanoparticles in wastewater runoff killed a third of exposed plants and microbes, according to a [CBC online article](#).
 - 6.) Studies show nanoparticles can [harm human health and the environment](#).
 - 7.) They can [damage lungs](#) and
 - 8.) [cause](#) symptoms such as [rashes](#) and
 - 9.) [nasal congestion](#),
 - 10.) and we don't yet know about [long-term effects](#)
- widespread application could [lead to unintended consequences](#). Scientists argue we should follow the precautionary principle, [which states proponents must prove products or materials are safe before they're put into common use](#).
[Before letting loose such technology, we should also ask who benefits](#).
<http://www.davidsuzuki.org/blogs/science-matters/2014/08/nanoparticles-panacea-or-pandoras-box/>

Silver Nanoparticles: Useful, But Dangerous?

By Cat Ferguson

(ISNS) -- From socks to medical supplies, retailers have spent the past few years seeing silver. The popular precious metal has powerful antimicrobial properties, especially when broken down to nanoparticle size, so it's been added to everything from washing machines to keyboard covers. [But two new papers suggest that the miniature version of the material should be used cautiously](#).

["Silver nanoparticles are a continuous source of ions that could be toxic for aquatic organisms that are swimming around or in the sediment. It will end up in the food chain,"](#) said Smitha Pillai, an environmental toxicologist with the Swiss Federal Institute of Aquatic Science and Technology and first author on a paper published in March in the Proceedings of the National Academy of Sciences. In the study, [algae were exposed to silver ions, which are silver nanoparticles released in water](#). [Larger pieces of silver release some ions, but at much lower concentrations. Within fifteen minutes, the algae showed signs of being exposed to a toxin, including significant reduction of photosynthesis and a defense response. Previous research has showed that silver ions are toxic to rainbow trout, causing eggs to hatch before they are fully developed and leading to high rates of death for the baby fish.](#)

In 2006, Samsung introduced a line of washing machines [that released silver ions into the wash water](#). [When asked about why the line was discontinued, a representative emailed the following statement to Inside Science: "We are continuously innovating our products with new technologies to meet the highest level of quality and performance consumers have come to expect from the Samsung brand."](#)

A separate research paper, published in the February issue of [ACS Nano](#), studied the effects of nanosilver on human intestinal cells. [Researchers found that exposure to nanosilver "did" damage to the cells DNA and temporarily changed their protein production.](#)

Nanomaterials in Organic Food? The USDA Is Looking the Other Way

October 3rd, 2014-- by Pamela Coleman PhD--This story originally appeared in the Fall 2014 issue of [The Cultivator](#), The Cornucopia Institute's quarterly print publication.

At their October 2010 meeting, the [National Organic Standards Board \(NOSB\)](#) [unanimously approved a guidance document recommending that "Engineered Nanomaterials be prohibited from certified organic products as expeditiously as possible. We respectfully request that the National Organic Program take immediate actions to implement this guidance document."](#)

[As of today, the USDA National Organic Program \(NOP\) has taken no action to implement this recommendation. Engineered nanomaterials are being added to food, while consumers, who have put their trust in the safety of organic food, are being kept in the dark.](#)

Nanomaterials are tiny particles measured in nanometers, or billionths of a meter. Nanoparticles have at least one dimension of less than 100 nanometers (nm). As a comparison, a strand of DNA is about 2 nm across; a red blood cell is 7,000 to 10,000 nm across. Due to their small size, nanoparticles ingested in food may move throughout the body in unknown ways.

There are naturally occurring nanoparticles, such as smoke from wildfires, and incidentally produced nanoparticles, such as those created in the process of flour milling. **Engineered nanomaterials (ENMs), in contrast, are not naturally occurring or incidental; they are intentionally manufactured.**

Common ENMs include titanium dioxide, nanosilver, zinc oxide, aluminum, and carbon nanotubes. The properties of ENMs differ significantly from the properties of larger particles, even those of the same chemical composition.

Many people are unaware that engineered nanomaterials can be added to foods, fruit and vegetable coatings, food packaging materials, supplements, and cosmetics. Titanium dioxide increases the whiteness of mints, milk, yogurt, and dairy substitutes. Nanomaterials are also used in chocolate, salad dressings, cereal, pasta, and other common foods.

Many food companies have invested heavily in nanotechnology, the science of creating and using nanomaterials. There are many applications for food use, but, according to a 2014 report by Friends of the Earth, "the extent to which nanomaterials are used along the food chain continues to be shrouded in mystery because of the lack of publicly accessible product registries or product labels." **Because labeling is not required, manufacturers have removed references to nanomaterials from their product labels; as a result, it's no longer possible to verify that the products contain nanomaterials.**

Use of nanomaterials in food is not regulated by any U.S. federal agency. The Food and Drug Administration (FDA) does not require nanomaterials to be listed on the product label. Consumers may assume that the lack of federal oversight means that nanotechnology has been well studied and proven safe, **but such is not the case.**

The Friends of the Earth report concludes that nanoparticles in food can harm human health, although the specific effects are not well understood. **The report explains that ENMs are more chemically reactive and more bioactive than larger particles of the same chemicals. Several other organizations have written reports urging caution regarding the many uses of nanotechnology in food, and requesting oversight from federal regulatory agencies.**

Due to their very small size, nanoparticles are more likely than larger particles to enter human cells, cross the blood brain barrier, or move across the placenta from mother to fetus. They've been shown to damage DNA, cause lesions on the liver and kidneys, and disrupt cellular functions.

Dr. Mercola and Dr. Rowen on Ebola and Ozone Therapy

Play: to 13:00: http://youtu.be/ELZssQQ_M28

For the horrific conclusion to this go to:

https://www.facebook.com/DrRobertJRowen?hc_location=timeline

Oxidative therapies work by stimulating your immune system, enhancing mitochondrial processes, and facilitating healing with virtually no side effects, and can be used either as treatment or prevention. They can also be used as a potent anti-aging health strategy for general wellness. I also encourage you to look at Dr. Rowen's channel on YouTube,⁴ where you can find a number of examples of what oxidative therapies can be used for so that you can avail yourself of this relatively inexpensive and incredibly safe therapy.

To locate a clinician who can administer oxidative therapy you can try the following sources:

- [Dr. Rowen's website](#) has a list of oxidation doctors, trained by Dr. Rowen and his team
- [American College for Advancement in Medicine \(ACAM.org\)](#)
- [International College of Integrative Medicine \(ICIMED.org\)](#)
- [OxygenHealingTherapies.com](#) also has a list of doctors trained in a variety of oxidation therapies
- [American Academy of Ozonotherapy](#)

Prolozone Therapy for Joint Injuries and Pain

Watch: <http://www.youtube.com/watch?v=v4g7Dt-B7Wc>

From this report we read: http://articles.mercola.com/sites/articles/archive/2014/10/26/ozone-therapy-ebola.aspx?e_cid=20141026Z1_SNL_art_1&utm_source=snl&utm_medium=email&utm_content=art1&utm_campaign=20141026Z1&et_cid=DM58836&et_rid=706010352 According to Dr. Rowen, ozone therapy is also very beneficial for heart disease, immune diseases, injuries, and chronic degenerative diseases such as osteoarthritis. As an example, Dr. Rowen has found that ozone is about 85 percent effective in knees and only slightly less effective in hips, when given as an injection. *"I'm actually injecting oxygen. One percent of it is ozone O₃, 99 percent of it is oxygen O₂. They're getting a blast of oxygen and they're getting ozone. There are two effects,"* Dr. Rowen explains. *"(1) They're getting oxygen, the most important thing those cells need to heal and (2) they're getting ozone. Ozone instantly modulates the inflammation. It knocks out the excessive nitric oxide that's in the joint. It increases other chemical mediators that reduce inflammation."*

Watch: <http://www.youtube.com/watch?v=i4nR1ht6Cko>

GDS Technologies' Portable Water Generators

Wow, it looks like the day has finally come that we get to make the big announcement that one of the exotic free energy generators has made it to market. [Patrick Flanagan](#), who just purchased a 5kW system, brought this one to our attention. <http://www.gdstechnologies.ca/index.html>

GDS Technologies LTD, out of Ontario, Canada, has a water-powered, portable genset available for sale on their website, in output sizes of 5 kW, 10 kW and 15 kW, at a price of around \$1000/kW.

They say they can also custom build these in sizes up to 50 kW. It is controlled by a simple on/off switch.

It is much less than half as loud as a gasoline or diesel genset of the same power output. One tank of water (e.g. 4 gallons for the 5 kW) will run the device for three days; or you can hook a hose up to it (there is a check valve), and not worry about refilling the tank. It emits no pollution, no fumes, so it can be run indoors.

They will ship globally. The 15-day money-back guarantee doesn't include duties and shipping fees. "Please allow up to 14 business days," for shipping probably refers to Canadian orders. International probably takes more.

Let them know PES referred you, for a likely discount and commission for PES.

Disclaimer: It is your constitutional right to educate yourself in the arena of health and medical knowledge, to seek helpful information and make use of it for the benefit of you and your family. You are the one responsible for your own health. In order to make decisions in all health matters, you must educate yourself. The views and nutritional advice expressed by Dr. Scott Johnson are not intended to be a substitute for conventional medicine. If you have a severe medical condition, see a competent physician. I do not claim to "cure" disease, my goal is to help you to make physical and nutritional changes in your own body so that your body can heal itself.

Update From Invive Silver: (Comment: I recommend you print this whole section below)

The 10,000 PPM is MANDATORY, meaning the correct protocol in a life and death situation where death is "IMMINENT" within 72 hours. If you do not think you will die in 72 hours, then take the 5,000 PPM. Some Ebola patients die in 48 hours and some die in 21 days. If you are already bleeding from orifice, then the Ebola has advanced and you MUST use the 10,000 PPM.

Tell your people: Ebola Can kill within 48 hours to 21 days,

It takes a minimum of 3 days to ship the Invive from our factory because our Manufacturing is in a small town where it is delayed by USPS for 1 day; for the Silver to travel to the Airport in the next larger City. That is why we ship Priority, because if we shipped Express overnight it would "still" take 2-3 days to arrive. In the case of a worst case Ebola infection by the time the Silver is delivered to them in 3 days, they could be dead.

So they must purchase in advance and have the silver on hand to be safe. That is just a plain actual fact.

I myself have 3 bottles of 10,000 PPM with me wherever I am/travel.

That is barely enough meaning the minimum to attack the Ebola, while waiting for more silver to arrive.

So they should have at least 3 bottles of 10,000 stockpiled in advance. (Assuming the USPS trucks are still running during an Ebola outbreak and that the Cities are not locked down with no one allowed to enter or leave, including the Courier Trucks.

EBOLA

(Note 5000ppm is mentioned here but in an advanced case 10,000ppm should be used-see above for more clarification)

Invive 5000ppm Mild Silver Protein ++ When combating an advancing presentation of Ebola within the subject individual, it is "MANDATORY" to maintain a "STEADY STATE" of Silver in your bloodstream every 4 hours = 6 times per day for adults of 120 lbs and up, (but reduced for children via percentage of their bodyweight in relation to 120 lbs.).

"UPDATED '2014' PROTOCOL"

1) If you have been (or suspect you have been) exposed to Ebola take this dosage:

***** 5,000 ppm 5 cc/1tsp. 4 times a day or every 6 hours.**

2) If you are starting to display symptoms take this dosage:

***** 10,000 ppm 5 cc/1tsp. 4 times a day or every 6 hours.**

3) If you are in full blown Ebola symptoms going to terminal take this dosage:

*** 10,000 ppm 5cc/1 tsp of 10,000 every hour.

Go to: <http://www.dr-johnson.com/>

Note: Selenium has been found to be almost totally depleted from the soils where Ebola is prevalent in Africa and has been found to be very helpful in the prevention of Ebola.

I recommend: Selenium - 90 tablets See below and far below

Computational genomic analysis of **hemorrhagic fever viruses**. Viral selenoproteins as a potential factor in pathogenesis: <http://www.ncbi.nlm.nih.gov/pubmed/9152513>

They talk about Ebola being a “viral selenoprotein” and “Biosynthesis of this protein **could impose an unprecedented selenium demand on the host**, potentially, leading to severe lipid peroxidation and cell membrane destruction, and **contributing to hemorrhagic symptoms.**” It is well documented **that selenium plays a significant role in the regulation of blood clotting** via its effects on the thromboxane/prostacyclin ratio, and effects on the complement system.

From: ADVANTAGE INTERNATIONAL

To: drjohnson@ix.netcom.com

Subject: Fw: Vitamin C & the Ebola treatment - trade fear for knowledge

Importance: High

In addition to the Invive Silver, a Ebola patient need high doses of Vitamin C.

The Invive Silver stops the Ebola Virus, **but you MUST put the Vitamin C back in their body, that the Ebola has taken away.**

Again for clarity: The INVIVE Medical Journal Silver wipes out/eradicates the Ebola Virus but excerpt: **Here is what Ebola does that is fatal: It causes the complete removal of all vitamin C from the body. No one actually knows what mechanism is involved in doing this, other than a malfunction that is not permanently destructive to whatever is triggered to remove all vitamin C. All the researchers know is that vitamin C drops to zero and all the symptoms of ebola are consistent with a complete loss of vitamin C.**

From the report at: <http://jimstonefreelance.com/> we read:

The actual way ebola kills is by causing a severe cytokine release in blood vessel walls, which if already irritated by a viral assault, will rupture from the irritation caused by a strong cytokine release. With regard to ebola, the exact cytokine is called IL-6, which is inhibited by 41 percent with adequate vitamin C present. This means, that from this mode of action alone, vitamin C will reduce the impact of ebola by 41 percent. If you combine this with the fact that vitamin C will strengthen the blood vessel walls as well, the two ways vitamin C helps will work in combination to prevent death from ebola, especially if ebola, which removes all vitamin C weakens the blood vessel walls by removing vitamin C to begin with.

Comment: So taking a true, natural, vitamin C is a major factor in fighting off Ebola especially considering Ebola chief action of fatality is causing the blood vessels to rupture through the body where you bleed out of every orifice. Vitamin C (full spectrum source with the bioflavonoids, from a plant source) strengthens the blood vessels.

I highly recommend: Vitamin C-400 - 180 tablets or C Complete Powder 81 G

Is Selenium Deficiency Behind Ebola, AIDS and Other Deadly ... ★★

Ebola and other deadly viruses, including the human immunodeficiency virus 1 (HIV-1), **might be stimulated by deficiencies in the mineral selenium.**

Zaire-where the Ebola and HIV-1 viruses first appeared-may be a viral "hot zone" because of low selenium levels in the soil and widespread selenium deficiencies among people living off that land.

Too strange to be true? To the contrary, a similar connection has been established in China, where a common virus mutates into a dangerous form when it infects people deficient in selenium.

Selenium, an essential mineral, functions as an antioxidant and a component of another antioxidant, glutathione peroxidase. Deficiencies of either substance impair the body's immune system and ability to fight infections. But if recent research is any indication, the role of selenium in disease prevention may be much more profound than previously imagined.

"It is certainly intriguing that a number of viruses have emerged from these regions in Africa, which appear to be selenium deficient," said E. Will Taylor, Ph.D., a viral researcher at the University of Georgia, Athens.

[Selenium - prevents retroviruses HIV, Cocksackie, Ebola ...](#)

Low Selenium levels lead to weakened antioxidant defenses, reduced immune surveillance, higher viral replication rates and thus conditions favoring viral mutation. It is also known that Selenium prevents a number of Retroviruses like HIV, Cocksackie, Ebola, Marburg and Flu viruses from replicating in the host cells.

It interferes with the reverse transcription of the viral RNA to viral DNA thus preventing virus replication.

Research shows it prevents the progression of HIV to AIDS. Professor Luc Montagnier of the Pasteur Institute (one of the discoverers of HIV) states that "Selenium was currently the most realistic hope for those infected with HIV in the world's impoverished nations, of the slowing of the progression of HIV to AIDS..."

[Avian Flu - Killer of Millions by Dr. Johnson--full file mp4 - click to download](#)

****NEW**** [Dr. Johnson's Preparedness, Survival, Pandemic Teachings](#)

[Bleach is friend in this Ebola fight](#)

As for the presure washer/sprayer, if they are using 5.25% Household bleach at a rate of 1:10 for 10 minutes of exposure; that would effectively kill the virus. -- Making a mixture of bleach and water will provide only the disinfectant, not the detergent base. Therefore, a two-step process may be needed if cleaning is to be performed prior to disinfection.

-- If a bleach and water mixture is made, use only chlorine bleach without the scent additive, as this reduces the resultant parts per million (ppm) of available chlorine.

-- There is a difference between a germicidal bleach (6.15 percent hypochlorite), a laundry bleach (6.0 percent hypochlorite), and a discounted bleach (5.25 percent or less hypochlorite).

-- A contact time of one minute for the hypochlorite (bleach and water) solution should provide adequate disinfection for non-porous surfaces. This is accomplished by a thorough wetting of the surface with the hypochlorite solution, then allowing it to air dry.

Providing for the appropriate disinfectant contact time, which refers to the amount of time necessary for the germicide to come into contact with the organism and result in a significant reduction in the number of microorganisms, is a critical step in the disinfection protocol.

[Chlorhexidine Gluconate, Hand Sanitizer & Surgical Gloves in Ebola Prevention](#)

Regarding Ebola a wise risk mitigation action **would be near full time use of surgical gloves combined with frequent use of hand sanitizer on those gloves**. Note that using hand sanitizer directly on skin could result in skin disruption / drying which could increase the risks of infection with Ebola if exposed.

Prior to such an outbreak and needed use of gloves, **the proper use of Hibiclens (Chlorhexidine Gluconate) as a skin lotion could provide prophylactic protection against infection as it continues to invisibly kill enveloped viruses for hours after application. We believe Hibiclens offers a huge advantage to those who know of its existence, use it properly, and have it on hand before it becomes unavailable.** We believe Amazon is the most cost effective source for Hibiclens (CHG)

In that regard, a key item to note is that once things become public there will very little time to react in either gathering supplies or reuniting with loved ones before travel restrictions are imposed. **Things key to have on hand at that point are disposable medical gloves & hand sanitizer to keep the gloves clean.** One should expect protective disposable exam gloves to become unavailable. Currently such gloves are readily available at Sam's Club at half the price available elsewhere.

Sources:

<http://www.ncbi.nlm.nih.gov/pmc/articles/PMC1631428/pdf/brmedj00478-0011.pdf>

<http://pissinontheroses.blogspot.com/2014/08/the-1st-sign-your-city-was-attacked-by.html>

Everybody knows a global pandemic is coming sooner or later. The very structure of human society -- with high-density cities and rapid air travel -- creates a "perfect storm" for the spread of infectious disease.

Ebola has a fatality rate of 50 - 90 percent, depending on the strain. It causes severe immunosuppression and often leads to death by internal dehydration from the inability of the intestines to absorb water. **People with suppressed immune systems seem to be especially vulnerable to Ebola, so one of the most obvious defensive strategies is to support your immune function with the following nutritional supplements:**

- **Vitamin D-3 (which is well known to function as an antiviral medicine) Vitamin D 5,000 IU - 60 capsules**
- **Zinc (helps your immune system resist infections) Zinc Liver Chelate™**
- **Selenium (also boosts immune function) Selenium - 90 tablets**
- **Vitamin C (full spectrum source, from plants if possible) C Complete Powder 81 G & Vitamin C-400 - 180 tablets**

-----Original Message-----

From: Virginia

Subject: **Inexpensive nutrition info especially for Ebola**

Hi Scott, Thanks for your info re: Ebola preventative and treatment. I'm doing some other research of my own:

Natural sources for Selenium, Vitamin C

After reading your PDF and hearing your teaching, I wanted to share these with you and your listeners, especially for people who are on a tight budget, like myself:

++Selenium

Brazil nuts are very high in selenium <http://www.livestrong.com/article/341342-selenium-brazil-nuts/> I had not been getting them, b/c of the frequent mold I was getting with the shelled ones. I'll try them shelled next time.

++ Rosehips

I've been taking rosehips powder as a natural source of vitamin C for several years: Rosehips is supposed to have 60 X as much vitamin C as an orange??? You can also use it, apparently, to treat wounds. <http://www.livestrong.com/article/117457-rose-hips-benefits/> See:

http://www.ebay.com/sch/i.html?_from=R40&_trksid=p2050601.m570.l1313.TR0.TRC0.H0&_nk_w=rosehips+powder+&_sacat=0

++ Moringa

I just started trying this highly nutritious protein powder, that is fairly inexpensive if you consider its high nutrients. It has all the essential aminos, plus others, and over 100% of 3 B vitamins in 1/2 teaspoon: Moringa oleifera. I got it from Swanson vitamins:

<http://www.swansonvitamins.com/organic-india-moringa-leaf-powder-8-oz-pwdr> Warning: It tastes bad (grassy taste) so I just put it into empty capsules. They have it in capsules also, maybe even in a better form than powder. Swanson has a lot of email coupons if you sign up, and free shipping on orders over \$50 usually.

They also have inexpensive Cod Liver Oil in softgels for Vitamin A and D They also have inexpensive pea protein powder to make protein shakes, for like \$9.00/lb.

Stop suppressing your immune system

It's also a good idea to stop suppressing your immune system on a day-to-day basis. How do people suppress their immune systems?

- 1) **Lack of sufficient sleep.**
- 2) **Consumption of processed junk foods.**
- 3) **Consumption of medications.**
- 4) **Smoking cigarettes.**
- 5) **Sedentary lifestyles (avoidance of exercise).**
- 6) **Avoidance of sunlight (not spending enough time in nature).**
- 7) **Nutritional deficiencies of important minerals like zinc.**
- 8) **Chemotherapy and radiotherapy treatments.**
- 9) **Exposure to pesticides, herbicides, glyphosate and other chemicals.**
- 10) **Eating GMOs.**

This last point is a huge one: **eating GMOs suppresses immune systems so much that I believe the most likely people to die in the next pandemic that sweeps through North America are those who eat a lot of GMOs.** To avoid this, **buy organic.**

Seven Facts You Should Know About Ebola--Be Prepared for a Pandemic!

How to prepare for a pandemic? The usual: **plenty of food, water, first aid supplies, [face masks](#), and something to keep your mind occupied in the event you are confined to close quarters.** I also recommend essential oils but more about that in a moment.

You should also be prepared to physically isolate yourself. If a pandemic is even rumored, isolate yourself from large crowds, avoid commercial travel, and head out to your bug-out-location if you have one.

You might remember Dr. James Hubbard from a recent Backdoor Survival Book Festival. He is the author of [Living Ready Pocket Manual – First Aid: Fundamentals for Survival](#) and [DuctTape 911: The Many Amazing Medical Things You Can Do to Tape Yourself Together](#). When I asked him about this, he pointed to some information posted on his website and gave me permission to share it here on Backdoor Survival. Here are his thoughts including seven facts you should know about Ebola.

A new outbreak of Ebola is going on in Africa, and Doctors Without Borders is calling it “an epidemic of a magnitude never seen before”—not because of the number of cases or deaths. There have been more in previous outbreaks. **It's because of how the disease is spreading.**

In the past, Ebola has always stayed confined to a small region. **This time the same strain of the virus has been found infecting people several hundred miles from the original area.**

The questions on the minds of many people who don't live in Africa are, **could it come here?**

Comment: It already has thanks to the government.

Ebola is a horrendous viral disease **where the victims sometimes bleed out of every orifice before they die.**

Ebola is on the U.S. list for potential bioterror agents. That's because it's highly contagious and there's no vaccine or effective treatment. Also, though this is rare, people have traveled internationally with it before their symptoms started—including to the United States.

Stopping the Spread of Ebola: 7 Facts to Know

If Ebola comes to your country, here are some key facts you'll need to know to reduce your chance of getting it.

1. It seems to start in animals and meat. It's thought the disease starts in bats or monkeys. They can have the virus without getting sick. Then they infect other animals, who do usually get sick. People kill the other animals and contract the virus while either preparing the meat or eating it poorly cooked. Then the virus starts spreading from person to person.

2. After exposure, Ebola can kick in early or late. After someone is infected, the symptoms start anywhere from two to 21 days later.

3. Ebola doesn't spread exactly like the flu.

Flu: You can be contagious before you get sick.

Ebola: You're not contagious until you have symptoms.

Flu: The virus can spread through fluid droplets in the air (like from a sneeze).

Ebola: Ebola can also spread this way.

4. Ebola is highly contagious. You can catch it by coming in direct contact with any bodily fluids, including blood, semen, urine, saliva, vomit, feces & (aerosolized sneeze).

5. The symptoms make prevention more difficult. Symptoms make it hard for caregivers not to come into contact with those bodily fluids.

There's profuse vomiting and diarrhea. And the victim's blood can't clot. So you can't stop bleeding from the smallest scrape, prick, or bruise. Sometimes people spontaneously bleed out the nose, mouth, rectum, or urethra.

6. Ebola is still contagious after symptoms stop or the victim dies. Ebola doesn't stop being contagious with death or recovery. Victims' dead bodies still carry the disease, and people who recover may continue to be contagious for up to two months or more.

7. There are ways to protect yourself. It's essential to protect yourself at all times if you're caring for someone who may have the disease so you don't come into contact with the bodily fluids.

Basically, cover yourself in impermeable products from head to toe. Think goggles, mask, disposable gown, gloves, and shoe covers. If you're using needles, use them once only and dispose of them immediately.

Also disinfect your environment. Clean any exposed furniture, walls, or floors with a disinfectant, like a chlorine bleach solution, before future use. This may not all be possible during a long-term disaster, but do the best you can.

Essential Oils for Protection from Ebola and Other Viruses

In addition to healing, I am a huge believer in using essential oils to build up immunity in order to prevent sickness. I use essential oils myself and through trial and error, learn what works and what doesn't. I read as much as I can so that I can learn and make informed choices.

All that being said, I keep a spray bottle with Shield protective blend and witch hazel with me at all times for use as a hand and gizmo sanitizer. I spray it everywhere, including on my phone, my keyboard, on pillows and bedding, and more. If I feel a sniffle or a runny nose coming on, an essential oil blend goes in the diffuser 24/7.

One thing I did do when the recent Ebola headlines hit was do some research to find studies that specifically addressed Ebola and essential oils. I had some help but neither one of us could pull up any verified studies. On the other hand, there have been some studies and articles linking Cinnamon and Ebola. I like the cinnamon link since the Shield Blend I use contains Cinnamon Bark in addition to Clove, Lemon, Eucalyptus, and Rosemary.

I plan to keep searching for some credible information on the use of essential oils to mitigate Ebola, but in the meantime, any of the antiviral and antibacterial essential oils would be good to have on hand. Some examples are Thyme, Melaleuca, Oregano, Cinnamon and, of course the Shield blend.

How to Make An Essential Oil Protective Spray

Here is the recipe I use to make "Shield Protective Spray". This spray makes a terrific hand sanitizer, room freshener, and all around disinfectant and protectant.

Take a 2 ounce glass spray bottle and add 30 drops of Spark Naturals Shield Blend.

Top with Witch Hazel. Shake before using. That's it.

One more note. Shield Blend is actually an ancient blend based upon a legend that has its roots in 15th century England during the time of the great plague. Grave-robbing thieves developed their own blend of Clove, Cinnamon Bark, Lemon, Eucalyptus, and Rosemary to protect them while robbing the plague victims.

If you would like to try to make your own, here is a version that includes Lavender from [Contributing Author](#) Rebecca Schiffhauer.+-

DIY Shield or Thieves/Robbers Blend with Lavender

Ingredients

45 drops clove essential oil

35 drops lemon essential oil

25 drops eucalyptus essential oil

20 drops cinnamon essential oil

15 drops lavender essential oil

10 drops rosemary essential oil

Instructions

Combine the all essential oils and store in a dark 15 ml glass bottle

From: Karen

Subject: Essential Oil for Ebola

FYI. Some data provided by a friend who knows her essential oils

Studies show Ebola cant survive cinnamon essential oil.

<http://www.pinterest.com/pin/223350462744699098/>

<http://www.pinterest.com/pin/488218415828228356/>

Cinnamon Bark (Cinnamomum verum or C. zeylanicum) essential oil is considered GRAS (Generally Regarded as Safe) for human consumption by the FDA. To take orally, dilute ONE drop of oil in 2 tsp. of honey or in 8 oz of beverage (think milks...rice, soy, almond). You may need to increase the dilution even more due to this oil's potential for irritating mucus membranes. I don't advise cow's milk when you are sick as it irritates mucus.

You will need to ensure your essential oil is therapeutic grade to prevent adulteration.

Cinnamon and anti-viral studies:

<http://www.ncbi.nlm.nih.gov/pubmed/?term=cinnamomum+verum+antiviral>

FRESH ginger juice and elderberry are also great antivirals.

I am not a dr and this is not medical advice. Please do your own research. This is just a hint as to what you can research.

Karen

The CDC feels that the Ebola threat is serious enough that they just released these steps to help you protect yourself from contracting the Ebola Virus. It would be wise to have some rubber gloves for emergency situations.

Information from the [Centers for Disease Control](#)

Tuesday, September 30, 2014

If you must travel to an area affected by the [2014 Ebola outbreak](#), protect yourself by doing the following:

Wash hands frequently or use an alcohol-based hand sanitizer.

Avoid contact with blood and body fluids of any person, particularly someone who is sick.

Do not handle items that may have come in contact with an infected person's blood or body fluids.

Do not touch the body of someone who has died from Ebola.

Do not touch bats and nonhuman primates or their blood and fluids and do not touch or eat raw meat prepared from these animals.

Avoid hospitals where Ebola patients are being treated. The U.S. Embassy or consulate is often able to provide advice on medical facilities.

Seek medical care immediately if you develop fever (temperature of 101.5F/ 38.6C) and any of the other following symptoms: headache, muscle pain, diarrhea, vomiting, stomach pain, or unexplained bruising or bleeding.

Limit your contact with other people until and when you go to the doctor. Do not travel anywhere else besides a healthcare facility.

CDC has issued a Warning, Level 3 travel notice for three countries. U.S. citizens should avoid all nonessential travel to Guinea, Liberia, and Sierra Leone. CDC has issued an Alert, Level 2 travel notice for Nigeria. Travelers to Nigeria should take enhanced precautions to prevent Ebola. CDC has also issued an Alert, Level 2 travel notice for the Democratic Republic of the Congo (DRC).

A small number of Ebola cases have been reported in the DRC, though current information indicates that this outbreak is not related to the ongoing Ebola outbreaks in Guinea, Liberia, Nigeria and Sierra Leone. For travel notices and other information for travelers, visit the Travelers' Health Ebola web page.
