**Adults Targeted as Federal Government Prepares to Track the Unvaccinated Posted: 3/18/2015** During the National Vaccine Advisory Committee's (NVAC) February meeting, **American adults were put on notice by Big Brother that non-compliance with federal vaccine recommendations will not be tolerated. Public health officials have unveiled a new plan to launch a massive nationwide vaccination promotion campaign involving private business and non-profit organizations to pressure all adults to comply with the adult vaccination schedule approved by the Centers for Disease Control (CDC).<sup>1</sup> See:**

<http://www.cdc.gov/vaccines/schedules/downloads/adult/adult-schedule.pdf>

**NVAC has authored the National Adult Immunization Plan (NAIP) and, once finalized, the plan will be turned over to the Interagency Adult Immunization Task Force (AIFT) to create an**

**Recommended Adult Immunization Schedule—United States - 2015**

Note: These recommendations must be read with the footnotes that follow containing number of doses, intervals between doses, and other important information.

**Figure 1. Recommended adult immunization schedule, by vaccine and age group<sup>1</sup>**

Vaccine	Age Group	18-29 years	20-29 years	27-49 years	50-59 years	60-64 years	≥ 65 years
Influenza <sup>2</sup>		1 dose annually					
Tetanus, diphtheria, pertussis (Td/Tdap) <sup>3</sup>		Substitute 1-time dose of Tdap for Td booster; then boost with Td every 10 yrs					
Varicella <sup>4</sup>		2 doses					
Human papillomavirus (HPV) Anaval <sup>5</sup>		3 doses					
Human papillomavirus (HPV) Gardasil <sup>5</sup>		3 doses					
Zoster <sup>6</sup>		1 dose					
Meningococcal polysaccharide (MPSV2) <sup>7</sup>		1 or 2 doses					
Pneumococcal 13-valent conjugate (PCV13) <sup>8</sup>		1-time dose					
Pneumococcal polysaccharide (PPSV23) <sup>9</sup>		1 or 2 doses					
Meningococcal <sup>10</sup>		1 or more doses					
Hepatitis A <sup>11</sup>		2 doses					
Hepatitis B <sup>12</sup>		3 doses					
Adenovirus-influenza type 3 (AIDV) <sup>13</sup>		1 or 3 doses					

<sup>1</sup> Updated by the Vaccine Injury Compensation Program

Report all clinically significant postvaccination reactions to the Vaccine Adverse Event Reporting System (VAERS). Reporting forms and instructions on filing a VAERS report are available at [www.vaers.hhs.gov](http://www.vaers.hhs.gov) or by telephone, 800-811-7967.

Information on how to file a Vaccine Injury Compensation Program claim is available at [www.hrsa.gov/vaccinecompensation](http://www.hrsa.gov/vaccinecompensation) or by telephone, 800-336-2343. To file a claim for vaccine injury, contact the U.S. Court of Federal Claims, 111 Madison Place, N.W., Washington, DC, 20540; telephone, 202-331-6000.

Additional information about the vaccines in this schedule, extent of available data, and contraindications for vaccination is also available at [www.cdc.gov/vaccines](http://www.cdc.gov/vaccines) or from the CDC/NIID Contact Center at 800-CDC-INFO (800-332-6030) in English and Spanish, 8:00 a.m. - 8:00 p.m., Eastern Time, Monday through Friday, including holidays.

Use of trade names and commercial issues is for identification only and does not imply endorsement by the U.S. Department of Health and Human Services.

The recommendations in this schedule were approved by the Centers for Disease Control and Prevention's (CDC) Advisory Committee on Immunization Practices (ACIP), the American Academy of Family Physicians (AAFP), the American College of Physicians (ACP), American College of Obstetrics and Gynecologists (ACOG), and American College of Nurse-Midwives (ACNM).

**implementation plan. Notably, this task force is composed of “vested interest” stakeholders with no consumer representation for those groups concerned with vaccine safety and informed consent.**

NVIC has submitted our public comments and recommendations for the NVAC’s draft National Adult Immunization Plan.<sup>2</sup>

**Your opportunity to submit your comments and concerns about this plan has been extended to March 23<sup>rd</sup>. We encourage all of our readers to participate in the public comment process and submit comments to the NVAC on the NAIP. Please forward this article to family and friends and encourage them to submit public comments, too.**

What you need to know – the nutshell.

The basis of the NAIP **rests on Healthy People 2020 Goals,<sup>3</sup> many of which are arbitrary.<sup>4</sup>** The key fact the plan seems to lose sight of in using these goals as its foundation is

**...THEY ARE GOALS. These goals have no legal authority over your healthcare decisions and are being used by government officials to shape public health policy, which in turn is spurring legal mandates to force you to comply with them.<sup>5</sup>**

**The adult immunization plan also “incentivizes” doctors and other vaccine providers to convert patient data into Electronic Health Record (EHR) formats that can then be shared across state and federal electronic databases to track national vaccine coverage rates and also track and identify who is and is not vaccinated.** Many states already have electronic vaccine tracking registries (Immunization Information Systems - IIS) in place, but do not share this information due to laws preventing the sharing of personal medical information and/or limited vaccination data on adults. **This is where financial and other types of incentives come in to convince vaccine providers and state legislators to participate in the gathering of this private medical information on all adults.**

**The NAIP states that it will take more than providers raising awareness about the adult schedule and encouraging compliance to meet Healthy People 2020 goals. So the NAIP contains objectives that foster partnerships with your employer and your community and religious organizations to make you and all adults get every federally recommended vaccine according to the government-approved schedule.**

The NAIP makes it clear that in the future, **all American adults will be informed of the recommended adult schedule at every possible opportunity outside the healthcare provider domain. You will be encouraged to comply with the adult schedule not only by your healthcare provider, but also via community-based partnerships to ensure that you have the opportunity to roll up your sleeve at work, school, church and other community gatherings.**

Adults should examine this plan carefully because the U.S. Constitution guarantees American citizens the right to privacy.<sup>6</sup> In that context, it is important to understand that the **NAIP objectives include electronically harnessing your personal medical information**

and that of all adults for the purpose of increasing adult vaccine uptake in the U.S. by tracking your vaccination status, with little regard for your privacy.<sup>7</sup>

**There is no language in the plan that provides for consumer privacy protections.**

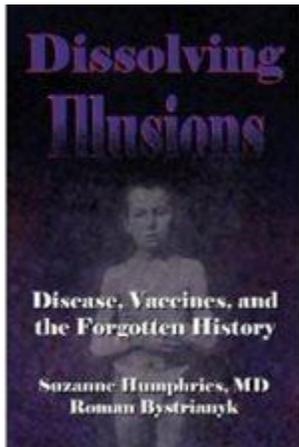

This is a glaring omission given the acknowledged and known risks for patient data being hacked (security breaches) by malicious outside entities.<sup>8</sup> The plan does not include provisions for raising consumer awareness of their ability to opt out of electronic tracking and patient data sharing schemes.<sup>9 10</sup>

Vaccine mandates are made at a state level and the NAIP is a federal vaccine use promotion plan that is has no legal authority to turn government vaccine use recommendations into vaccine use mandates.

Given the introduction of legislation<sup>20</sup> this year in many states to remove non-medical vaccine exemptions and restrict medical exemptions for school age children in an effort to force parents to comply with the CDC's *recommended* childhood vaccine schedule, there is little doubt that that the NVAC's latest plan will result in similar actions to force adults to use all federally recommended vaccines.

One only has to read stories posted [NVIC's Cry For Vaccine Freedom Wall](#) by healthcare workers who have refused flu shots and are being fired from their jobs to understand the threat posed by the NAIP. **Is your profession next? The short answer is yes.**

Make no mistake about this plan's intent, if "awareness" efforts and "incentivization" of vaccine policy do not increase adult vaccine uptake, the partnering with your employer and other community groups is meant to lower the hammer and force you to comply. The electronic tracking systems that are enthusiastically being embraced by not only the federal government but also state governments and employers, without regard for your privacy, will be used to identify noncompliers.

If you haven't read Dr. Suzanne Humphries' book *Dissolving Illusions*,<sup>21</sup> you may not realize that history is about to repeat itself. Government enforced vaccination through identification and door-to-door efforts to make everyone comply, like was seen with smallpox vaccination campaigns a century ago, is a real possibility again in America. Only this time it won't just be about one vaccine – it will be about a lot of vaccines you will be forced to get.

The noose being tightened around the necks of our children is being thrown over the necks of adults as well. The tightening of that noose is growing daily in an attempt to strangle vaccine freedom of choice by eradicating the ethical principle of informed consent.

This is very dangerous when the medical exemption has been narrowed by government so that almost no health condition qualifies for a medical exemption anymore. Families already personally impacted by vaccine reactions, injuries and deaths will be faced with more loss, including their financial stability if they are forced to be revaccinated.

The human right to protect bodily integrity and autonomy – the core value of the informed consent ethic – is at stake.

**This is a battle over freedom, values and beliefs.<sup>22</sup> What is at risk is your ability as a parent and individual to decide what medical risks you are willing to accept and vaccination is the forefront of this battle.**

For over three decades NVIC has supported informed consent protections in all U.S. vaccine laws and policies, **which means that parents and individuals must receive full and accurate information on vaccine risks and benefits and retain the right to make voluntary decisions to accept, delay or decline one or more vaccines without being sanctioned for their decision they make.**

**Your rights are being eroded and vaccine exemptions are under aggressive attack in many states & this battle will not be won without your voice and action.**

**Submit your comments on the NAIP by March 23<sup>rd</sup>** to the National Vaccine Advisory Committee and forward this article to your friends and family.

**Also register and encourage others to register on [NVIC's Advocacy Portal](#) today and join with other concerned Americans to protect informed consent rights.**

**This resource is free and will keep you informed on legislative actions underway in your state, provide guidance on what action to take, and connect you with your legislators.**

There is no time to waste. Please do not wait for someone else to do this...that someone is you and you can make a difference!

## **++ Just Say No To Acetaminophen**

Posted By Orissa On March 14, 2015 By Dr. Brownstein <sup>[1]</sup>

Acetaminophen (such as Tylenol®) is the most commonly used analgesic medication worldwide. I have never been a fan of using acetaminophen for any condition. Let me explain why.

A recent study published in the British Medical Journal (March 1, 2015)

**highlighted some of the adverse effects of acetaminophen.** The researchers looked at multiple trials that **reported adverse events related to acetaminophen use including mortality as well as**

**cardiovascular, gastrointestinal or kidney problems.** In one study, **the authors found a 90% increased risk in overall mortality in those taking acetaminophen.**

**Furthermore, there was a dose-response curve in the relative rate of mortality.**

**This means the highest exposure to acetaminophen was associated with a higher mortality rate when compared to the lowest exposure group.** Of the four studies

that looked at cardiovascular adverse events and acetaminophen exposure, **all found a dose-response with the highest users of acetaminophen having more cardiovascular adverse events (68%) as compared to the lowest exposure group (11%).** With gastrointestinal and kidney adverse events, a similar dose-response was found; **increasing doses of acetaminophen were associated with more problems.**

**Many physicians and lay people assume that acetaminophen is perfectly safe. It is not.** Of course, any substance taken in the wrong amounts could cause harm to the

body. However, acetaminophen is an example of a substance that has a small therapeutic window. That means that taking amounts slightly outside the therapeutic window could prove to be toxic. The liver is most affected by acetaminophen as that is where it is detoxified. The upper limit of acetaminophen a day is 4,000mg/day. For most people this maximal limit is safe. But, once the 4,000mg/day limit is crossed, the liver can be damaged and the damage can happen quickly. This upper limit for dosing acetaminophen can quickly be breached when someone is unknowingly using acetaminophen in common cold and upper respiratory remedies as well as prescription and non-prescription pain killers.

Also, children can overuse acetaminophen when they are ill with a fever. I would highly advise parents against using acetaminophen for fever control in both children and adults. The reason is that during an acute illness that produces a fever, the last thing anyone should do is to take a medication that is potentially toxic to the liver. It is best to treat children with a fever symptomatically with supportive care such as tepid bathing and rest..

One final note about acetaminophen use in children. I would strongly discourage the use acetaminophen either before or after a vaccine. A single dose of acetaminophen lowers the liver's ability to produce the potent antioxidant glutathione. All vaccines are designed to create an inflammatory reaction in the body and the body needs adequate glutathione levels to combat this inflammation.

Finally, the elderly need to be cautious when using acetaminophen. As compared to a young person, an elderly person's liver is more susceptible to damage from acetaminophen. If you take acetaminophen, use the lowest dose possible for the shortest time period. Also, it is best to support the liver with the proper supplements when using acetaminophen. This can include taking whole food vitamin C & products like Livaplex by Standard Process. There are many herbal products helpful for maintaining optimal liver function as well.

-----  
**Reply--Krista:**

Yes take 1 capsule of these 2-3 times a day on an empty stomach:

<http://goodhealthusa.com/products/Serrapeptase-250k-30-Capsules/>

It comes in a 90ct as well:

<http://goodhealthusa.com/products/Serrapeptase-250k-Capsules/>

**What is Serrapeptase**

*Serra Enzyme™ contains Serrapeptase, which is a naturally occurring proteolytic enzyme. It breaks down certain proteins by hydrolysis. The effect of negative protein hydrolysis means that you may better support normal body processes involving:*

- The natural healing process
- Sinus activity
- Fluid balance
- Joint mobility
- Post-surgical recovery
- Anti-inflammation, and
- Waste and toxin removal

*Serrapeptase may help to support and maintain muscle and joint health and promote normal cardiovascular arterial health.*

*Containing 250,000IU's of natural Serrapeptase, known as 'The Miracle Enzyme', Serra Enzyme™ is formulated to give maximum benefit in the minimum time.*

with 2 capsules of these of these twice a day:

**Boswellia Complex** by Mediherb

**Also another natural anti-inflammatory the product I prescribe is Tuna Omega 3 Oil (4-6/day)by Standard Process.** This product has the ideal ratio of EPA/DHA Omega 3 fatty acids and is molecularly distilled to remove any heavy metals that might be present. For more information go to:

<http://www.standardprocess.com/lit/tabsheets/tunaomega3oil8070.pdf>

**If joint degeneration is present I would also prescribe a product called JCTH by Innate.** This product contains specific nutritional factors to regenerate and repair joints (in as much as the body is capable of repairing itself in a given patient). For more information go to:

<https://www.innateresponse.com/SearchResults.asp?Search=jcth>

**Try this for at least a month and see how you do:**

Also if you apply CMO cream by Rich Distributing over the affected area 2-3 times a day this will also help greatly. See:

[http://www.microwaterman.com/Rich\\_MSM/Rich\\_MSM\\_CMO\\_Cream.htm](http://www.microwaterman.com/Rich_MSM/Rich_MSM_CMO_Cream.htm)

From: Laura

To: Contending for Truth by Dr. Scott Johnson

Subject: **Mild Silver Protein, Sinus Infections & Peripheral Neuropathy**

Hi Dr. Johnson, **I have a horrible sinus condition that started about 12 years ago, and I totally attribute it to being allergic to those nasty chemtrails.**

I looked at your Desk Reference to see if Peripheral Neuropathy was listed, but it is not. Do you know anything about this disease in relation to MSP? The only thing I did find was on this website :

[http://www.naturalnews.com/029779\\_peripheral\\_neuropathy\\_remedies.html](http://www.naturalnews.com/029779_peripheral_neuropathy_remedies.html)

It states towards the bottom of the article:

" \*Colloidal silver may help nerves regenerate and studies in Hungary found specific silver receptors on human nerve tissue."

(There is no other info that I can find about it.) I was just wondering if you had any info in this. Thanks & Blessings,

Laura

-----

**Reply--Laura:**

With a sinus infection the best way to directly go after this is to get any nasal spray atomizer bottle (like Afrin) and dispose of what is in the bottle and add 500ppm silver to the bottle. Now to make the 500ppm just add 10 parts distilled water to one part 5000ppm. This will be the strength you use in a nasal spray bottle. One drop of eucalyptus oil to this 500ppm solution is also very good for nasal use. When you use the 500ppm in the nasal spray bottle make sure you tip your head back and spray 3-5 times per nasal passage. You can do this several times per day. You would also want to take 1/4 tsp. of the 5000ppm held under the tongue once a day until you are doing better.

**++** I would also highly recommend you take Antronex By Standard Process for the allergy component of this sinus problem the silver is great for the infection, but it will not stop allergic reactions.

**Royal Lee (The Founder of Standard Process) on Allergies:**

*"In fact I'm becoming convinced that all allergy is only serious if a patient only complains of allergies because he's hyperalkaline. If he wasn't **alkaline** his allergies wouldn't amount to anything. You can prove that with a hay fever patient. If you normalize their **saliva** according to Hydrion test paper and get it down to seven by supplying the mineral acidifiers (By the way we put them up in tablet form known as **Cal-Amo**, which is equal parts of Ammonium and Calcium Chloride. It's a nutritional acidifier) as **soon as you get that saliva normal, down to seven, you'll find that antihistamines will completely and perfectly control the hay fever.**"*

*Very interesting! Did you know diphenhydramine hydrochloride (**Benadryl**) is quite often accompanied with **Ammonium Chloride**?? In fact Original Benadryl contained*

**plenty of Ammonium Chloride!**

**Standard Process TRIAD for Allergy control:**

**Allerplex**

**Antronex**

**Cal-Amo**

**MediHerb support:**

**Albizia Complex**

**Comment:** For allergies personally (as I have always had allergies) I keep a bottle of Antronex by Standard process nearby. If I have an allergy attack of any kind I take 1-2 tablets and bite into them (to crush them up) and let them sit under my tongue. Before I do this I hit my mouth with just a little organic peppermint oil to kill the liver taste of the Antronex. I let this sit under my tongue for 3-4 minutes and then swallow. This is the fastest way I know of to knock out an allergic reaction. God bless! Dr. J.

**Now for the Peripheral Neuropathy I would Rx:**

Inositol by Standard Process (6 day)

B6 Niacinamide by Standard Process (3 day)

Saint Johns Wort by Mediherb (2 day)

Magnesium Oil applied over the areas affected 1-2 times a day.

I would try this for at least two months to see what kind of progress you make.

That is interesting about the silver but the products listed above would specifically be given to regenerate the nerves.

Dr. Johnson

Subject: **Toothache Pain**

My brother doesn't have any insurance and is having some oral pain. Will the invive silver help with this? Lj =

-----  
**Reply:** If it is an infected cavity you would hold 1/4 tsp. of the 5000ppm silver in the mouth (try to direct it over the infected tooth) for 4-5 minutes, several times per day until the pain was gone. In addition taking Biodent (9 day) by Standard Process would actually help to rebuild the tooth if the body is capable of that. Now the best thing for the nerve pain is Inositol (9 day). It won't do anything for the infection or to rebuild the tooth, but it is the best thing for temporary nerve pain till he is out of the woods. I have all these products in stock and am still running the 5000ppm silver special which also provides free shipping within the U.S.. God bless!

Hello brother Scott hope you're in good health and both your daughter and you are doing well. I sent you a letter with a token of our love hope you receive it soon. I really need your help. Please pray for my health my **Dentist wants to pull my four teeth due to bone loss**. I am very scared I've been praying for a miracle. **Is there anything I can take to stop or reduce bone loss and protect my teeth and gums?** Your sister in Christ Sunita

-----  
**Reply--**Yes there is. I have seen excellent results with this protocol:

Biodent (by Standard Process) 9 a day or 3 with meals

Calcium Lactate (by Standard Process) 9 a day or 3 with meals

Cataplex F (by Standard Process) 3 a day or 1 with meals

If receding gums are involved **with** infection you need to also take:

Cataplex ACP (by Standard Process) 9 a day or 3 with meals

If receding gums are involved **without** infection you need to also take:

Cyruta Plus by Standard Process) 9 a day or 3 with meals

These are a professional line I have been trained in and carried for over 20 years. They

can be researched here: <https://www.standardprocess.com/Standard-Process/All-Products>

Subject: [Contending for Truth: ] herbal and mineral products

Scott, **I can't find herbal and mineral products that you sell on your website?** I

found the silver products, but not the other things for health you endorse? please direct me. Thanks, Randy

-----  
**Reply--**Sorry the one site <http://www.dr-johnson.com/> only sells silver. Since Standard process (the main professional line I sell) has banned all internet sales by doctors unless you go through an extensive consultation process. The other lines I sell (since they are professional lines) are also complicated to sell online. I attached a price list. My prices are retail Standard Process prices which is actually required by Standard Process if a doctor sells them. Just let me know what you need and I can get them to you asap.

**From: Zack**

**To: drjohnson@ix.netcom.com**

**Subject: another God-fearing man.....**

**What I'm really emailing you about is I finally ordered some of this Mild Silver Protein stuff from your web site today.**

**I am in very good health and work out regularly, but I suffer from **chronic shingles & some ongoing Candida**. Want to know how much to take to help.**

---

**Reply--** Now to treat Shingles (also known as Herpes Zoster) see the attachment for specific dosages and things you can do. This is the strongest DMSO I could find and it works on any herpes virus better than anything I have ever seen, even better than the silver and it is 100 times more cost effective than the massive dosages you would have to take of the silver. <http://www.herbspro.com/51065/Liquid999UnfragrancedPlastic.htm>  
This stuff can burn you so start slow. You should apply it from the top of your back to the lower part of your back once a day. This targets the virus where it lives, which is the deep spinal nerve root ganglion. The Silver just cannot get to it, but the DMSO can. You can also apply the DMSO with the AG cream (see below) over your left side where you have the shingles outbreak. God bless!

For the Candida:

**30 drops per day of the 2000ppm (hold under the tongue for at least one minute before swallowing) is a maintenance dosage and unless you are dealing with a specific issue, would be sufficient for everyday use. There are 2129 drops per 4 oz. bottle or a 71 day supply if you take 30 drops per day. This dose should be sufficient to eventually knock out the candida you described.**

**To make the AG Cream (AKA Silver Cream) get some Aloe Vera gel and add drops of the 2,000 ppm silver to the gel to the point just before it starts to liquefy.**

**The current expiration dates on the Invive mild silver protein is 2028 as it is extremely stable.**

**Mild Silver Protein Website: [www.dr-johnson.com](http://www.dr-johnson.com)**

**Subject: Re: Shelf-life?**

Shelf life is 15+ YEARS.

This is the MOST Stable Silver in the World.

**Our Lot Control Bottles from 1995 are still perfect, and will be perfect for the next 100+ years.**

There is no other product like ours, and the proof is in the RESULTS it EMPIRICALLY Demonstrates to the user.

---

**Debbie: See below:**

**From:** Debra

**To:** Scott Johnson

**Subject:** **Bone spurs supplements and treatment**

Dear Dr. Johnson, I have a bottle of Phosfood which I purchased from you a while back and I would like to know what the protocol is for using it on a bone spur above the heel. How much Phosfood and how often should one apply it to the bone spur? **Topically full strength at least once a day but you can do so 3 times a day if you wish as this will work faster.**

Should one also take it orally and if so, how much? **You can and this should accelerate things. 30 drops once per day in juice for a month or until the spur is gone.**

I also heard you saying to apply it with DMSO sulfur. Should they be applied together? **The DMSO should be applied after the phosfood and allowed to dry. You can use a hair dryer or fan to accelerated this.**

How long should it take for the bone spur to be healed? **The only way to know this for sure is by an X-ray to see your progress. If you have a current x-ray to compare this too that would be ideal.**

Is there anything else recommended to treat bone spurs? **Yes ultrasound. The most aggressive way to go after this would be for you to apply the phosfood and DMSO like I described above and then get an ultrasound treatment over the spur area. This would give you the fastest results possible that I am aware of. Also taking some extra magnesium would also help to break down the spur. Ultrasound alone is great for spurs but with the other things I mentioned you are really going after the root of the issue and should achieve incredible results. I believe the Lord showed me this as I don't know of any other doctors that know what I just relayed to you. I have seen this work on many patients and my own daughter has bunions (from her genetics) and we are using this protocol above (minus the ultrasound, as I don't have one anymore) and in a short time she has already achieved amazing results with total pain abatement and greatly reduced size. God bless!**

Thank you very much and God bless, Debbie

### **++ Depression/Anxiety/ADD Supplement Protocol**

As an alternative doctor I would never advise my patients to come off mind altering drugs cold turkey. It will not turn out good unless God literally intervenes so their system is not dependent on this. **Most drugs are addictive, so you have to supply the body with what it really needs, while you try to wean yourself off the meds.** The clinical protocol I have used for this is:

Minchex by Standard Process (6 day)

Cataplex G by Standard Process (6 day)

Tuna Omega 3 by Standard Process (4 day)

Relaxall by Professional Botanicals (1-3 day as needed)

Magnesium 300 by Innate (2 day)

This would be taken till they had totally weaned themselves off the medication for at least a week and then they could start to reduce their dosage. These are essentially food tablets (not drugs) and it takes a lot of effort to break free from a chemical dependency like this, so I am more aggressive in the beginning and taper down as the patient progresses. I have these in stock if they would like to try them. God bless.

**Subject:** Re: **Upset Stomach, Pregnancy Nausea & Pink Eye**

Dr. J, **Regarding the Okra Pepsin, my wife's pregnant friend stated she felt relief soon after she started taking it. That was a few days ago and she has told us each day she has had relief she never had before.** THANK YOU!

Regarding the Silver and Pink Eye, my oldest (5 year old) came down with what looked to be Pink Eye Tuesday. I remembered you talking about a diluted silver solution as a remedy for this. I made the diluted solution and applied a couple drops in the infected eye (and a couple drops in the other eye just in case) Tuesday night when I got home from work. **It was amazing. The discharge increased in the evening before bed which told me the silver went to work immediately.** I applied a warm washcloth to her infected eye to extract the discharge and then put a couple more drops in each eye just before she went to bed. Wednesday her eye looked almost back to normal, but my wife repeated the process 3 x's just to make sure. Today, her eye is back to normal.

PRAISE THE LORD!!!!!! Thank you, Dr. J.

One more question for you. My buddy and his bride moved out to a farm a couple years ago from the city and now comes **down with terrible allergies.** Would the silver nebulizer treatment I have heard you speak about help with this?

Here is a link to the ultrasonic nebulizer we have ordered. The price isn't too bad for what you get. I was looking at another one for sale, a nice German made one, but it is twice the price and service for the unit is overseas.

<http://www.ebay.com/itm/BRAND-NEW-LUMISCOPE-RECHARGEABLE-PORTABLE-NEBULIZER-KIT-/201017675163?ssPageName=ADME:X:RTQ:US:1123>

GOD BLESS!!

Todd

**Todd: Awesome to hear about your wife's pregnant friend & your little girl. I have a really strong stomach but if I ever get an upset stomach I immediately take 2 or 3 of the Okra Pepsin and usually within minutes the pain is gone. You could even open up the capsules into juice to get a quicker effect. Plus it actually rebuilds the lining of the stomach and is good for you.**

**Yes for pink eye the 50ppm is just amazing. I have never seen it fail.**

No the silver in the nebulizer would not help with allergies but the one you ordered looks great. **God bless! Dr. J.**

**Subject:** **Breast Feeding and Adult Acne**

Brother Scott, I recently heard your post where you spoke about adult acne. I however am nursing a 5 mo old and we let The Lord decide when we get pregnant, therefore I'm cautious when taking supplements. Is there anything I can do for my acne? It seems to

be getting worse and I'm desperate. My dad is a dermatologist but he just wants me to take antibiotics, use retin A or take accutane which i wont do. If it werent so bad i wouldnt bother you about it. i do think its my liver bc i have a few liver spots and keratosis pilaris as well. Kelsey

-----  
Reply--Kelsey:

Yes I agree with you and taking these drugs (especially Accutane-which is totally toxic to the liver) could totally decimate your 5 month old from your breast milk alone. I mean Accutane has killed people. I would take choline with a good liver & bowel detox for 2 months. I would Rx:

Choline 6 day (4 bottles total)

Livaplex 3 day (2 bottles total)

SP Cleanse 5 day (2 bottles total)

This is a very through detox and if you have never detoxed before it would be similar to you never getting an oil lube and filter for your car, so you would be way overdo. Start slow and gradually build to these dosages so there won't be a huge toxic dump into your blood stream that could reach your breast milk. You can research these products on the drop down bar here: <https://www.standardprocess.com/Standard-Process/Home>  
God bless! Dr. J.
